

The Electronic Card Wall

The Best of Traditional Agile Card Walls - The Power of Electronic Tracking

It's time to combine the benefits of the traditional agile card wall and computer-based project tracking. An agile card wall is powerful for a local team, but is nearly impossible to scale to an enterprise environment. While the tactile process of moving story cards provides a clear visual representation of progress, it requires a very manual effort to calculate velocity or provide deep insight. A story card stuck to a wall is hardly secure, and offers no automatic backup.

Computer-based project tracking begins to address some of these issues, but tends to ignore some of the team-focused benefits of a traditional card wall. An Electronic Card Wall delivers the very best of both in one innovative tool. The tactile process of card movement, the benefits of a big and visible card wall, and the ease of change are all incorporated into a platform which allows for the scalability, security, and deep analytics required by today's enterprise. View a demonstration at cardwalls.com.

Benefit Comparison			
	Agile Card Wall	Computer-based Tracking	The Electronic Card Wall
Extensive Data	NO	YES	YES
Charting Capabilities	NO	YES	YES
